C07PC *FORGED IRON* *New*

These new tour-inspired C07PC players distance irons are engineered with a pocket cavity design to offer maximum distance, forgiveness, and superior stability.

A new concept in ball flight trajectory through a more engineered and centered CG.

C07PC

FORGED IRON

These are the most forgiving and accurate irons in the PROTOCONCEPT GOLF lineup, owing to the significant redesign of their predecessor, the C07.

By repositioning the center of gravity (CG) closer to the center, the C07PC Irons are more efficient at impact transferring more energy to the ball, improving distance, and increasing spin. Moreover, the head stability feature has been substantially improved, which contributes to their accuracy and is a crucial advancement for the latest generation of irons.

These top-tier players distance irons offer a unique feel that seamlessly transitions to the driver, woods, irons and the other golf clubs.

Material : FACE : SAE8655 Nickel Chromium Molybdenum Steel
 BODY : Carbon steel (S20C)
 Finish : Nickel Chrome Plating,
 Mirror finish on back of face

COSTP *FORGED IRON* *New*

The new generation of the COSTP irons feature a highly engineered Power Pocket to optimize the ball launch and flight trajectory

To pursue the perfect trajectory, PROTOCONCEPT GOLF sought out guidance and feedback directly from TOUR professionals to redesign the C05 irons. The new COSTP irons boast both forgiveness and accuracy known from their predecessor but encourage a better trajectory.

C05TP

FORGED IRON

3D CAD technology strategically positioned the center of gravity (CG) of each C05TP iron

The C05 irons, praised by top players, feature strategic CG placement for easier long irons and precise scoring irons. The C05TP irons offer stability, maneuverability, and accuracy with a repositioned sweet spot. The set includes #4 iron to gap wedge (GW).

A new trajectory concept in response to requests from tour professionals.

C05TP irons feature improved trajectory, more spin, and better control. Updated sole shape and CG enhance direction and spin.

Material : FACE : SAE8655 Nickel Chromium Molybdenum Steel
 BODY : Carbon steel (S20C)
 Finish : Nickel Chrome Plating, Satin Finish

SPEC

C01.5TH *FORGED HYBRID IRON* *New*

A Tour-spec hybrid iron that launches higher with more ball speed and is easier to hit a than long iron

The C01.5TH's hollow body and dynamic face boost ball speed and distance. The CG aids easy launch and controlled flight.

C01.5TH

HYBRID FORGED IRON

Designed for a combination of playability and spin performance

PROTOCONCEPT GOLF improved the C01.5 long iron for better ball flight and spin. The new C01.5TH offers fairway wood distance with precision and style, keeping the Tour-inspired low-profile head.

Tour-inspired head with forgiveness

The improved hollow-body and Tour-inspired head with an SAE8655 steel face enhance distance and power. The refined C01.5TH sole offers forgiveness and accuracy.

Refined Top Line for Better Ball Striking

The new C01.5TH has a thicker top line for ideal CG placement, offering forgiveness, maneuverability, and better ball striking.

SPEC

CO1TB
inner CERAMIC

The World' s First* with Ceramic Inside

A Next-Generation Tour Blade That
Defies Norms for Musclebacks

*According to our research

C01TB

inner CERAMIC

Center of gravity design for each club number by 3D CAD
 Crafted with evolved ceramic integrated forging

Ceramic, which has a much smaller specific gravity than iron, is used as the built-in material. The manufacturing process, which forges the soft iron into a single round bar, results in a more forgiving and precise center of gravity design than the previous C01 model, which adopted the built-in titanium manufacturing process.

Material : BODY : Carbon steel (S20C)
 Finish : Nickel Chrome Plating,
 Mirror finish on back of face

inner Ceramic : #5~#pw

CO3TC *FORGED IRON*

Crafted with unparalleled ultra-precision soft iron forging a tour cavity back evolved through center of gravity designed for each club number

A tour cavity back with high-precision soft iron forging crafted with minimal manual processes using an ultra-precise forging process and CNC undercutting.

C03TC FORGED IRON

The design of the center of gravity for each club was optimized using 3D CAD

Utilizing the "C03" model's center of gravity design, we pursued optimal functionality and unity for each club. Club stability was improved, aligning the sweet spot with players' needs. 3D CAD optimized the center of gravity for all clubs, easing handling. A 4-iron that fits the flow is in the lineup.

Precision soft iron forging integrated molding and CNC undercutting (#4-#7)

We achieved a unique hitting feel with soft iron forging and CNC machining, differing from traditional methods. The CNC undercut shape for each club type, with new dimensions, lowers the center of gravity, broadens the sweet spot, and improves forgiveness and lift in long to middle clubs.

Material : BODY : Carbon steel (S20C)
Finish : Nickel Chrome Plating,
Mirror finish on back of face

CNC undercutting : #4~#7

FORGED CB WEDGE

A model embodying forgiveness and beauty

A forgiving and agile model, distinct from pro versions, with a round, wide sole that resists bouncing and bite on any swing. Pairs smoothly with hollow or pocket cavity irons.

FORGED CB WEDGE
TECHNOLOGY

FORGED CB WEDGE

Cavity back design that boosts forgiveness

Larger head than pro models for increased security and mis-hit forgiveness.

Maintains balance with modern hollow or pocket cavity irons without losing wedge maneuverability.

Innovative sole minimizes bounce and bite, offers sole bounce effects for any swing. Sliding sole boosts strike stability and reduces mis-hits.

Face dot milling demonstrating spin performance under tough conditions

Increased face score line forging processes enhance precision. New Face Dot Milling ensures consistent spin and better control in all conditions.

Material : BODY : Carbon steel (S25C) Forged
 Finish : White Chrome Plating

FORGED WEDGE

High Precision Manufacturing of
Innovative Sole Shapes

Innovative sole bounce theory,
developed over years, is realized
with precision in top forging factories,
ensuring outstanding performance
through meticulous detail.

FORGED WEDGE
TECHNOLOGY

FORGED WEDGE

Three Sole Shapes to Accommodate All Swing Types

The lineup includes three types of sole variations to accommodate all swing types: STANDARD, WIDE SOLE and CUT DOWN.

Further improve your performance by selecting the sole that best suits your hitting style.

High Precision Manufacturing of Innovative Sole Shapes

The technology's innovative sole bounce theory is backed by years of research by golf club designers.

The club is manufactured in the world's best forging factory to materialize the theory with high precision.

Outstanding performance is delivered through attention on particulars for every step of the process.

Material : BODY : Carbon steel (S25C) Forged
Finish : Plated Finish
